Portfolio

EDUCATION

Bachelor of Science
Computer Science
Western Governors University
Expected Graduation:
January 2027

Associates of Science
General Studies
Big Bend College
June 2012

SKILLS

Python - Django, Flask, Pandas, NumPy, Pytest, Selenium

JavaScript - TypeScript, Express, Angular, Node, Vue, NPM

Java - RxJava

AWS - EC2, S3, DataSync, Cloud Storage, CloudFormation

DevOps - CI/CD, LXC & LXD, Ansible, Docker, Nginx & uWSGI Server, Bash

Database - SQL, MongoDB, PostgreSQL, SQLAlchemy

Linux - Vim, Neovim, Tmux, Ubuntu, Arch

Computer Architecture, SOLID principles, OOP, TDD, Data Structures & Algorithms

CERTIFICATE

AlgoExpert Certificate
AlgoExpert.io | 2020

Full Stack Developer
Coding Dojo | 2019

EXPERIENCE

SDE | Amazon Web Services(AWS) | Seattle, WA | October 2024 - January 2026

Developer on Transcribe Streaming; Focused on transcriptions with identification and redaction.

- Managed and optimized CI/CD pipelines achieving 99.9% deployment success rate with automated testing and validation processes.
- Updated Streaming and Batch dashboards with RxJava and TypeScript, separating connected entities that diverged after the PII entity update, while building an allowlist for regional users.
- Created tests (unit, integration, mock and canary) for the PII entity update, validating components in isolation and monitoring their interactions before live deployment.
- Resolved 50+ high-priority tickets during on-call rotations with average response time of <15 minutes, maintaining 99.99% service uptime.
- Authored design documents and led design reviews for PII entity update, incorporating feedback from 3 teams before implementation; reviewed 30+ pull requests to uphold code quality.
- Partnered with ADC and security reviewers to ensure handling of sensitive transcript data met AWS compliance requirements before launch.
- Shipped PII entity feature through staged rollouts with automatic rollback, launching with no customer-impacting incidents.
- Debugged a Python script that prompts users on setting up their local environments with the correct team packages, consolidating requirements from several docs.

Software Developer | Outlier.ai | Remote | August 2024 - October 2024

Developer on the Flamingo Team. SQL Pipeline Specialist focusing on prompt writing and query testing.

- Thoroughly tested and/or created SQL queries to ensure accuracy, reliability and adherence to requirements.
- Created and maintained comprehensive documentation for SQL pipelines, queries and processes. Achieving no negative feedback from the Quality Assurance (QA) team.

Software Developer | Parthenon Software | Vancouver, WA | February 2024 - July 2024

Developer on the Lifebalance Team; enhanced front-end and back-end systems, leading to improved performance and reduced costs. Developed custom solutions and automated deployments, increasing user engagement and operational efficiency.

- Improved database call efficiency by 25% by implementing SQLAlchemy ORM and optimized data retrieval and storage processes with Elasticsearch.
- Scraped data from clients using Selenium, formatted it with Beautiful Soup, and integrated records into a PostgreSQL database, reducing data processing time by 90%.
- Configured an LXC container with Nginx, Django and PostgreSQL; successfully launching a learning platform with high performance, scalability, and secure data management.
- Streamlined course and class management by implementing a user-friendly interface in Django Admin, resulting in a 50% reduction in data entry time.
- Automated deployment workflows with Ansible scripts and uWSGI Server, reducing deployment times by 60% and minimizing manual errors.
- Updated the Lifebalance website in a Linux environment with Vim/Neovim and tmux, building custom Vue.js information cards that displayed the discounts for each company on the site.

Contract Scripting | Freelance | Remote | June 2020 - January 2024

Designed and executed scripts on a contractual basis for clients. Supported data analysis, optimized database queries, and reporting tools.

- Assisted in optimizing SQL queries, boosting database query performance by 15%.
- Collaborated on HTML/CSS improvements for internal reporting tools, enhancing user experience and achieving a 25% increase in user satisfaction ratings.
- Utilized Bokeh library for data visualization techniques to translate intricate client data into impactful visual representations.
- Generated scripts to parse and extract information from PDF documents exporting to Excel.

Front End Developer | State Construction | Kent, WA | December 2019 - December 2021

Worked on construction sites helping in the office with booking and IT development.

- Built an application with Python Flask microservices architecture that recorded user input and experiment participant responses.

PROJECTS

FINGER COUNTER [LINK]

Tech Stack: Python, JupyterLab, OpenCV, Scikit-Learn

- Utilized OpenCV as a proof of concept, captured a moving image of the user's hand(Exposure Correction) which distinguished between the fist and the fingers(Segmentation).
